

But As We Age, Our Skin
May Tell A Different Story.

When it comes to skin revitalization procedures, we also know that you want better results, without the excessive pain and extended recovery time that may be associated with more invasive surgeries or procedures.

That is why we developed the ellacor® System with Micro-Coring™ Technology – a first-of-its-kind device for the treatment of wrinkles that is designed to:

Reduce aging skin

Improve skin architecture

Provide natural-looking results

INDICATION FOR USE

The ellacor® System with Micro-Coring™ Technology is indicated for use by medical professionals for the treatment of moderate and severe wrinkles in the mid and lower face in adults aged 22 years or older with Fitzpatrick skin types I-IV.

IMPORTANT SAFETY INFORMATION

Side effects:

Common side effects associated with the ellacor® procedure may include but are not limited to pain/discomfort, redness, swelling, bruising, tightness/pulling of skin, dryness, roughness, peeling, crusting, tenderness, bleeding, numbness, burning, tingling, or circular marks on the skin.

Potential uncommon side effects of the ellacor® procedure may include but are not limited to itching, hyper/hypopigmentation, hematoma, infection, skin irregularities, tissue necrosis, asymmetrical appearance of the bilaterally treated regions, scarring, and anesthesia toxicity.

Contraindications:

The ellacor® procedure should not be performed on patients that are pregnant/nursing, or those with a history of keloids, bleeding disorders, allergies to anesthesia, or autoimmune conditions that may affect the treatment outcome. It should not be used in patients that have skin cancer, open wounds/sores, or facial implants in the treatment area. Patients should not take high doses of anti-coagulants or NSAIDS for 14 days pre-treatment, or have had cosmetic injections/fillers in the treatment area during the previous six months. For a complete list of contraindications, please visit ellacor.com.

Everyone is Talking About!

The Procedure You Have Been Looking For.

If you want visible, natural-looking results without the excessive downtime that may come with more invasive procedures, ellacor® may be your answer.

of patients showed improvement on the Global Aesthetic Improvement Scale¹

overall patient satisfaction when considering all treatment sides¹

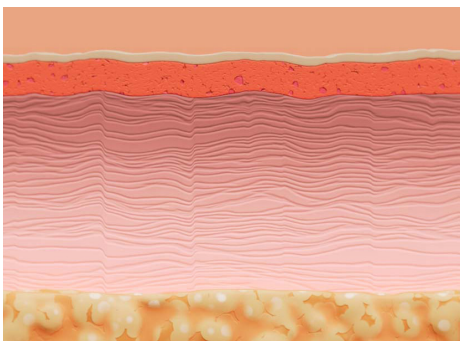

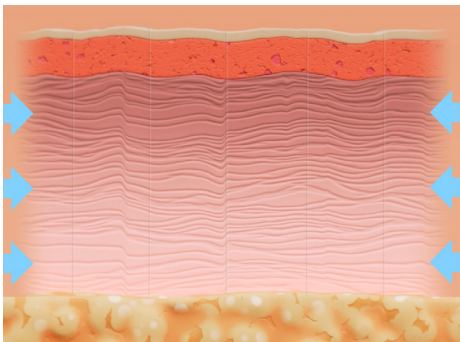

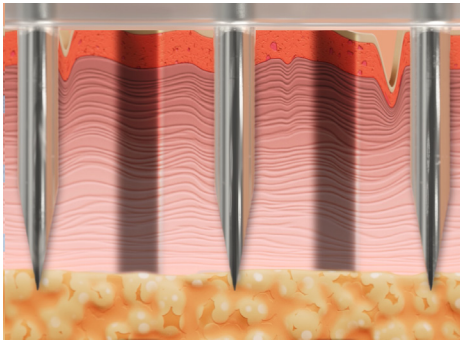

in the pivotal clinical trial, 70% of patients felt comfortable going out in public or returning to work 3 days post-treatment¹

¹. Pivotal Study to Evaluate the Effectiveness of a Micro-Coring Device Treating Moderate to Severe Facial Wrinkles. ClinicalTrials.gov NCT 03573271; submitted for publication. 51 subjects completed the pivotal study; subjects were treated 2-3 times with 7%-8% skin removal and up to 5mm needle coring depth. Each patient heals differently; mild to moderate side effects may still be present up to 30 days post-treatment per physician assessment. All clinical data, including patient healing, treatment pain on the 0-10 Wong-Baker Scale, Global Aesthetic Improvement Scale scores, and Subject Satisfaction is on file with Cytrellis.

How it Works.

The ellacor® System is a first-of-its-kind technology for the treatment of moderate and severe wrinkles.

- The breakthrough device uses specially designed hollow needles that precisely remove micro-cores of skin.
- After the skin is removed, the body’s natural healing response goes into effect as the skin quickly realigns to close the cores.
- The procedure is typically finished in less than 30 minutes.
- The results are improved skin architecture and natural looking results

Natural Look. Noticeable Results.

“I loved my ellacor® results. I was looking to get a little something more from a treatment, but wasn’t ready for surgery and ellacor® delivered exactly what I had in mind.

I noticed a change in my skin after just one treatment and after my third session I felt like my skin was just so refreshed and brought back to life. Ellacor® really gave me a newfound confidence in myself.”

Andrea, ellacor® patient
